higher-order function

Canonical name	HigherorderFunction
Date of creation	2013-03-22 12:33:38
Last modified on	2013-03-22 12:33:38
Owner	Logan (6)
Last modified by	Logan (6)
Numerical id	4
Author	Logan (6)
Entry type	Definition
Classification	msc 68Q01
Synonym	functional
Related topic	Currying

Any function that maps a function to anything or maps anything to a function is a *higher-order function*. In programming language terms, a higher-order function is any function that takes one or more functions as arguments and/or returns a function.

For example, a predicate which makes some statement about a function would be a higher-order function.
